

KAFOU LESPWA AND REOS PARTNERS: CREATING A SHARED VISION FOR HAITI

BUILDING A PLATFORM FOR CHANGE

The country of Haiti has long faced societal challenges including political crises, poverty, and food insecurity. To respond to these issues, a network of citizens launched a platform for change known as [Kafou Lespwa](#) (Crossroads of Hope) with the goal of transforming Haiti into a more equitable and prosperous country.

The group invited Reos Partners to guide their efforts to collaborate and co-create solutions to their country's complex challenges. Together, the team convened Haitians from all areas of society – politicians, activists, artists, youth, unionists, and more – to express their concerns and align a shared vision to reimagine their country's future.

THE REOS PARTNERS APPROACH

Using transformative scenarios, developed by Reos' Adam Kahane, participants were empowered to share their views on current realities, leading to the development of scenarios for different possible futures. This method enabled the group to widen their system understanding and to hold strategic conversations for change.

The 5 Steps of Transformative Scenarios

Convene a team
from across the
whole system

Observe what's
happening

Construct stories
about what
could happen

Discover what
can and must
be done

Act to transform
the system

COLLABORATING FOR A MORE PROSPEROUS HAITI

The Kafou Lespwa initiative has received national attention in Haiti. The organizers are using learnings to reach new audiences and raise awareness of Kafou Lespwa with an open invitation for citizens to join their collaborative movement towards a more just society.

“We needed Reos to help us collaborate together with people who agree that they want to solve this complex situation, but don't know how to do it. Moreover, people who do not really trust each other, or know each other, people who believe that they will never be able to collaborate.”

Charles Clermont, Kafou Lespwa Leader

Let's move forward together.
